TOOLLY SERBIA

B2C OUTSOURCING PLATFORM

PROJECT SUMMARY

Appomart has developed an IT project that presents a formidable challenge: Toolly, a B2C outsourcing platform that enables customers to quickly and easily place orders for a wide range of household, professional, and educational services, and allows companies and specialists to conveniently and regularly receive orders. This application implements functions for creating orders for a variety of categories, as well as for setting additional unique parameters.

SCOPE

- ✓ App for iOS and Android

ZEVS.GROUP

PROJECT LAUNCHED

ZEVS

APPLICATION FOR EFS

PROJECT SUMMARY

Our team was honored to develop the new release of the Zevs mobile application, which is a key element of the ZEVS charging ecosystem and allows users to manage the charging process of electric cars. We updated the design, developed the ability to book charging sessions, improved the usability of existing functions, and added many new ones. The current version also offers users the choice of tariff plans, such as fixed and per minute rate tariffs. Furthermore, we added the functionality of payment via Apple Pay and Google Pay, as well as support for using several credit cards at once. Additionally, we made the application more stable and fixed a bunch of bugs.

SCOPE

- ✓ Concept, redesign, content

ORP

PLATFORM FOR CONDUCTING MEDICAL RESEARCH

PROJECT SUMMARY

The ORP platform provides a comprehensive set of features for successful conduct of medical research. It combines patient questionnaire data collection and processing, formation of a database with survey history, flexible data access system, and cloud service. We have paid special attention to compliance with the requirements of Roskomnadzor (the Federal Service for Supervision of Communications, Information Technology, and Mass Media) and personal data protection. The software is built on the Appocore platform, which ensures high reliability, security, and scalability. With ORP-cloud, medical research is enhanced, contributing to the development of technology in medicine.

SHOCAS.COM

PROJECT LAUNCHED

SHOCAS

CROWDSOURCING DELIVERY

PROJECT SUMMARY

We created a crowdsourcing delivery service akin to Uber in the world of food delivery from stores. The service was designed for those who do not have the time or opportunity to shop for food on their own. The app has a cutting-edge interface with location tracking and drawing up a shopping list. The app works in Germany and provides an easy and efficient way to order food. Customers can select the items they want, and then a delivery agent is assigned to fulfill the order. Customers can track the delivery agent in real-time, allowing them to receive their food quickly and conveniently.

🌐 KUSHVSPORTE.RU

KUSHVSPORTE

SPORTS PREDICTION LEAGUE

PROJECT SUMMARY

The application is an aggregator of sports analytics for KushVSporte with features for betting, subscriptions to cappers, a personal account with a wallet, and social network functionalities. It is an all-in-one platform. The client requested an update to the existing Android application. We developed a cross-platform application for both platforms simultaneously. The project turned out to be multifunctional and complex. It was interesting to work with such market professionals. Since 2010, KushVSporte has been providing the opportunity to create public pages for cappers, where users can share their forecasts, track match results in real-time, and analyze statistics and profit/loss charts. Users can participate in predictor tournaments, receive live odds information, and access sports statistics before the match.

GOBALKANS.ME

RELOCATION TRACKER

PROJECT SUMMARY

A: GoBalkans is the first relocation and visa application tracker app in the Balkans. We developed a task tracker and contact manager for GoBalkans to make the emigration process to the Balkans easier. The app allows customers to see all their upcoming tasks and document signings, as well as contacts for their accountant, lawyer, translator, lawyer, and personal manager. With this app, customers can complete their relocation to the Balkans without any hassle. We also developed the GoBalkans.me landing page. The app also features an intuitive user interface and provides step-by-step guidance on the relocation process. With this app, customers can easily and conveniently complete their relocation to the Balkans.
